

INFORMED CONSENT FOR PEDIATRIC DENTAL TREATMENT OF:

Patient Name

It is necessary for us as health professionals to obtain your consent for your child's planned dental treatment or oral surgery. Please read this form carefully and ask about anything that you do not understand.

1. I hereby authorize Dr. Janelle Lee and her assistants/hygienists to perform upon my child the following dental treatment or oral surgery procedures, including the use of any necessary advisable local anesthesia, analgesia, or radiographs.

In general terms, the dental procedures will include

- a) Teeth cleaning, fluoride application, and any necessary X rays.
 - b) Applying plastic "sealants" to the grooves of teeth
 - c) Repairing diseased or broken teeth with fillings or crowns.
 - d) Treating infected teeth and/or gums
 - e) Removal of one or more teeth.
2. I have had explained to me by Dr. Janelle Lee and have had sufficient opportunity to discuss the patient's dental condition/problem(s), the planned procedures and treatment, and the benefits to be reasonably expected from this treatment plan, compared with alternative approached and/or no treatment.
 3. Although their occurrence is extremely remote, some risks are known to be associated with dental procedures. The usual and most frequent risks include but are not limited to, the possibility of pain or discomfort during the treatment, swelling, infection, bleeding, injury to adjacent teeth and surrounding tissue, development of a temporomandibular joint disorder, temporary or permanent numbness, and allergic reactions. Occasionally, a child may also chew/irritate his or her own cheek, lip, or tongue while numb. It is the responsibility of the parent to closely monitor children who are numb to decrease the risk of such complication.
 4. **I understand** that treatment for children includes efforts to guide their behavior by helping them to understand the treatment in terms appropriate for their age. Behavior will be guided using praise, explanation, and demonstration of procedures and instruments, using variable voice tone and loudness.

I understand that should the patient become uncooperative during dental procedures with movement of the head, arms, and/or legs, dental treatment cannot be **safely** provided. During such disruptive behavior, it may be necessary for the assistant(s) to hold the patient's hands, stabilize their head and/or control leg movements.

I further understand that should the patients become uncooperative during dental procedures with excessive body movements, the patient may need to be wrapped in a "protective stabilization" or "papoose board" to prevent injury and enable Dr. Janelle Lee to **safely** provide the necessary treatment.

In general terms, the behavior management techniques during treatment will include:

- a. Tell, Show, Do
- b. Distraction
- c. Positive reinforcement
- d. Use of voice control to gain the attention of a disruptive child.
- e. Nitrous Oxide with oxygen analgesia (laughing gas)

- f. Use of physical restraint to safely accomplish necessary dental procedures. This may include hand and/or head holding (by staff or parent), as well as “protective stabilization” (papoose).

The above behavior management techniques have been explained to me both verbally and in writing. I have had a chance to ask questions. I understand the what, when, how, and why, of their use, and the risks/benefits/available alternatives.

5. For advancing medical-dental education, I give permission for the use of clinical photographs of the patient for diagnostic, scientific, educational. Or research purposes.
6. **I understand** that I may revoke this consent to treatment at any time and that no further action based on this consent will be initiated except to the extent that the treatment and procedures have already been performed or initiated.
7. **I confirm** that I have read (or it was read to me) and understand the information on both pages of this form and that all blanks were filled in, and all inapplicable paragraphs, if any, were stricken before I signed below. The proposed treatment has been explained to me, as have any alternative methods of treatment and the advantages and disadvantages of each. I am advised that although good results are expected, the possibility and nature of complications cannot always be accurately anticipated. Therefore, there can be no guarantee as to the result of the treatment.
